Operator's Manual
for Morse Hydra-Lift Drum Karrier
with Spark Resistant Parts,
Manual Lift and Tilt

Model 400AM-60
Serial Number 1210 to 0314 (MMYY)

Receiving Procedures

Every Morse drum handler is inspected prior to shipping. However, damage may be incurred during transit.

- Check for visible damage. If you choose to accept damaged freight, always sign noting the damage on the **BILL OF LADING**.
- Document the damage and have the truck driver sign. We recommend keeping a digital camera at your receiving dock for this purpose.
- Open packages expeditiously to check the condition of the goods. There is only a 24 hour window to notify the carrier of any concealed damage.
- **IMMEDIATELY REPORT ALL DAMAGE TO THE SHIPPING COMPANY!** Then you may contact Morse for assistance with your freight claim.
- Morse Manufacturing will not be held responsible for any damaged freight that is not signed for as damaged.

Delivery to non-business addresses without a loading dock result in additional freight charges. Residential delivery fees, inside delivery fees, re-delivery charges, and lift gate services will be added by the truck line, and are non-negotiable.

Limited 2 Year Warranty

Morse drum handling equipment is guaranteed against defects in workmanship or materials for **TWO YEARS** when used properly within its rated capacity. Warranty does not cover wear from normal use or damage from accident or abuse. Motors and other purchased parts carry the warranties of their manufacturers.

For warranty claims, contact your Morse Dealer to obtain a return authorization number, and for return freight advice. Return freight must be prepaid.

In all instances, liability is limited to the purchase price paid or to repairing or replacing the product. Customer assumes liability for any modifications, unauthorized repairs or parts substitution.

Safety Information

While Morse Manufacturing Co. drum handling equipment is engineered for safety and efficiency, a high degree of responsibility must be placed upon the machine operator to follow safe practices, based primarily on common sense, upon which true safety depends.

Failure to follow the safety precautions in this manual can result in personal injury or property damage. Observe the same precautions as with similar machinery where carelessness in operating or maintenance is hazardous to personnel. Carefully read the safety precautions below and throughout this manual.

**Operator's Manual for Morse Hydra-Lift Karrier Model 400AM-60
with Serial Number 1210 to 0314 (MMYY)**

Safety Information (continued)

DANGER - Indicates a situation which, if not avoided, *will* result in serious injury or death. This signal word is limited to the most extreme situations.

WARNING - Indicates a situation which, if not avoided, *could* result in serious injury or death.

CAUTION - Indicates a situation which, if not avoided, can result in damage to the machine.

CAUTION – Do Not Transport with Drum Raised

ALWAYS LOWER THE DRUM HOLDER TO LOWEST POSITION BEFORE TRANSPORTING. The unit can become unstable when transporting with a raised load.

DANGER - Stay Clear of Power Lines

KEEP WELL CLEAR OF POWER LINES. Never approach a power line. Current in a high voltage line may arc some distance from the wire to the steel framed, grounded machine.

WARNING

The Hydra-Lift Karrier is designed to handle one drum of the types listed at the top of page 3, under **2. Machine Description**. *DO NOT* attempt to handle any other type of drum or object. *DO NOT* exceed the weight capacity of 800 Lb.

WARNING - Level Floors Only

For operation only on clean, level floors of suitable bearing capacity. Do not use on sloped surfaces, ramps, irregular or debris strewn floors.

WARNING - Do Not Modify the Unit

Under no circumstances should any modifications be made to the Morse machinery without factory authorization. Any modifications may void the warranty. This machine was designed to perform a specific job and alterations may result in injury to operator or machine.

WARNING - No Loose Fitting Clothing

Wear close-fitting clothing and safety equipment appropriate to the job. Loose fitting clothing may become caught on the machinery and cause severe personal injury.

WARNING - Hydraulic Fluid Under Pressure Can Be Hazardous

Escaping hydraulic fluid under pressure can penetrate the skin, causing serious injury. Avoid the hazard by relieving pressure before disconnecting hydraulic lines. Keep hands and body away from pinholes and nozzles, which eject fluid under high pressure. Use a piece of cardboard to search for leaks. If an accident occurs, see a doctor immediately and inform them of the nature of the accident.

CAUTION - Wear Safety Shoes

Wear safety shoes with non-slip soles and hard toe protection.

**Operator's Manual for Morse Hydra-Lift Karrier Model 400AM-60
with Serial Number 1210 to 0314 (MMYY)**

Machine Description

The Model 400AM-60 Hydra-Lift Karrier will pour a drum up to 60" high, measured from the floor to the lowest point of a horizontal drum. It is designed to lift, transport, and dispense a 55-gallon steel or fiber drum 22" to 23.5" in diameter.

The maximum full-drum capacity is 800 Lb. The capacity is derated to 500 Lb. for a half-full drum. The half-full rating is based on the tilt mechanism's capacity for handling an unbalanced bottom-heavy drum.

Options

- A smaller diameter drum can be handled with the correct size 55/30M Series Diameter Adaptor installed (see Diameter Adaptor literature).
- The adjustable Bracket Assembly (Part # 4556M-P) is **required** to handle a plastic drum without a top rim (see figure 2.1). The Bracket Assembly is also recommended when handling a fiber drum. You can also use the Bracket Assembly when handling a rimmed drum.
- To handle a 55-gallon plastic drum with suitable top rim, you **must** install either the Bracket Assembly or the Top Rim Clamp (Part # 4560M-P) (see figure 2.2). You can use the Top Rim Clamp to handle a 55-gallon plastic, steel or fiber drum with suitable top rim.

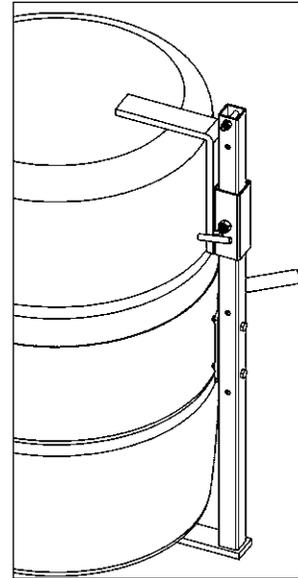

Figure 2.1
Plastic drum being lifted with part number 4556M-P Bracket Assembly installed.

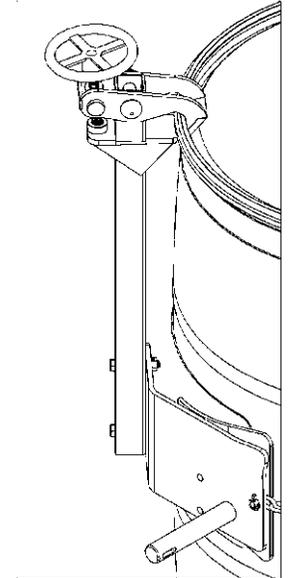

Figure 2.2
Plastic drum being lifted with part number 4560M-P Top Rim Clamp Assembly installed.

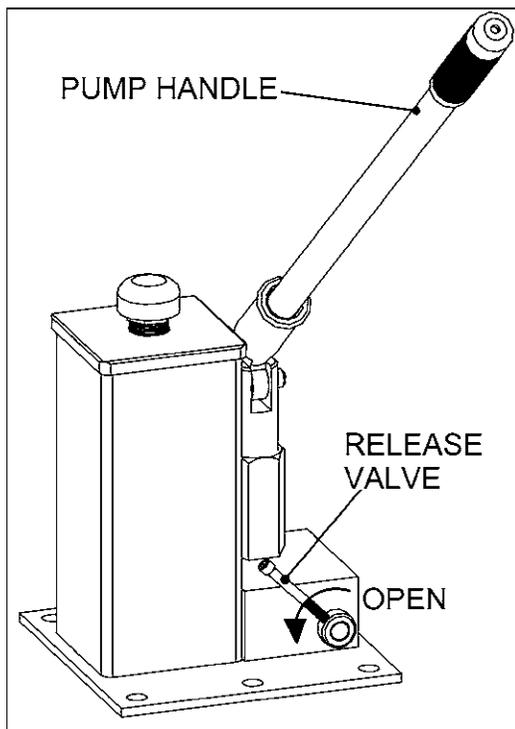

Figure 2.3

Controls

The Morse Hydra-Lift Karrier is manually propelled and steered.

There are two functions for the operator to control (Figure 2.3):

1. "LIFT" and lower function for vertical positioning of the drum
2. "TILT" function to control the degree of rotation of the drum

LIFT and Lower Function

To raise the drum

1. Insert pump lever handle into pump socket.
2. With the release valve closed, begin to pump the lever handle. The drum will lift.

To lower the drum

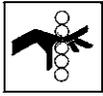

1. Open the release valve slowly, a part of a turn. Allow the drum to descend at a controlled rate. The valve may be reclosed to hold the drum at any height.

TILT Function

To tilt the drum

1. Turn the hand crank (item 90) to turn the drum.
2. Before releasing your grip on the hand crank, pull out the crank stop pin (item 89) to block the hand crank from spinning freely.
3. If the drum handler is equipped with the MORStop Tilt-Brake, there is no need to use the stop pin. Braking is immediate and self-actuating, without additional steps by the operator.
4. Note: To add the MORStop Tilt-Brake to an existing drum handler, order part # 3900-P for a field installation kit.

**Operator's Manual for Morse Hydra-Lift Karrier Model 400AM-60
with Serial Number 1210 to 0314 (MMYY)**

WARNING - Watch Out for Pinch Points

Stay clear of moving parts. Operator should remain behind the push handle during the lift operation.

Floor Lock

The screw-down floor lock is located on the base of the tower (figure 3.1). Turning the floor lock clockwise until it locks in the down position activates the floor lock. When the floor lock is activated it prevents unwanted free wheeling of the unit. Floor conditions determine the effectiveness of the floor lock. The operator should verify its holding action before depending on it to hold.

MORcinch Drum Holder Assembly

The drum holder assembly (or "saddle assembly") is the component on the Hydra-Lift Karrier that is intended to hold the drum. The MORcinch drum holder assembly is designed to secure a standard ribbed 55-gallon steel drum around its middle using a cinch chain and ratchet tightening system. The MORcinch drum holder accepts accessories for handling a plastic drum, a fiber drum, or smaller diameter drums (see Options on pg. 3).

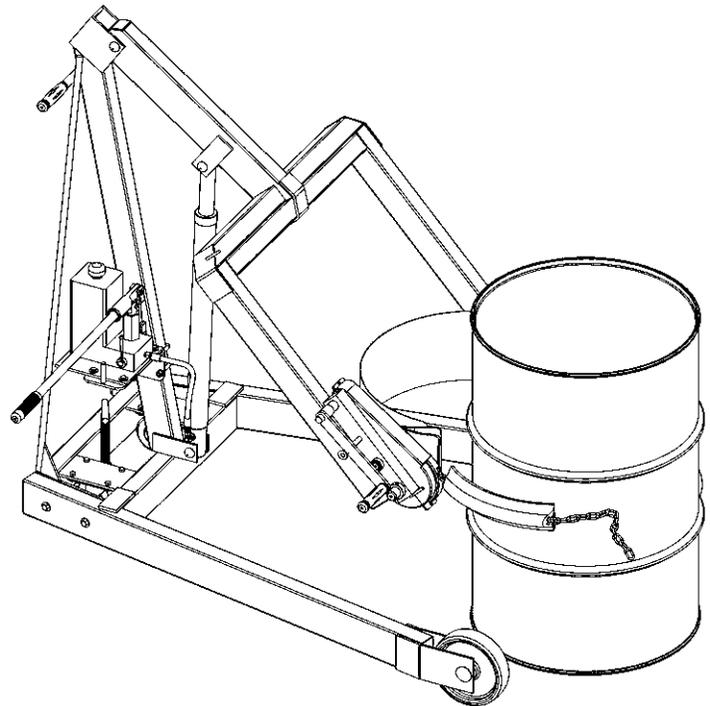

Figure 3.1

**Operator's Manual for Morse Hydra-Lift Karrier Model 400AM-60
with Serial Number 1210 to 0314 (MMYY)**

Assembly Instructions

Step #1: Place tower on floor, push-handle down. See figure 1.

Step #2: Attach each leg (item 4) using two 3/8-16x3" grade 5 bolts (item 2), flat washers (item 3), and lock nuts (item 13) as shown. Wheels should be parallel when assembled properly. See figures 1 & 2.

Please unpack and identify the following parts:

- 1 ea. Tower with hydraulic pump and cylinder, etc.
- 2 ea. Legs with wheels
- 1 ea. Overhead assembly with drum holder, etc.
- 1 ea. Package with hardware

NOTE: The clevis pins and mating surfaces at their joints should be coated with grease during assembly.

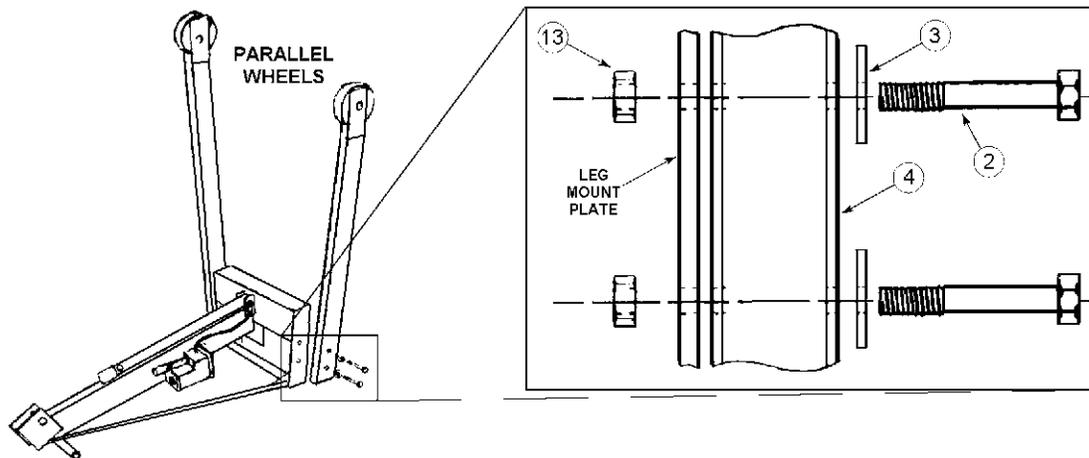

Figure 1

Figure 2

Step #3: Tip the tower up so it stands on the casters and wheels.

Step #4: Lift overhead assembly into position. A drift pin can help align the holes. Insert a greased clevis pin (item 12) through mast cap and boom. Install a 5/8" washer (item 9) and 3/16" roll pin (item 8) in the end of the clevis pin. See figure 3.

Step #5: Next, connect the cylinder (item 16) to the overhead assembly: Align ram eye with holes in boom clevis plates and insert a greased clevis pin (item 12) with four 5/8" washers (item 9). Place another washer (item 9) on outer end of clevis pin and drive a 3/16" roll pin (item 8) into the hole at the end of clevis pin. See figure 4.

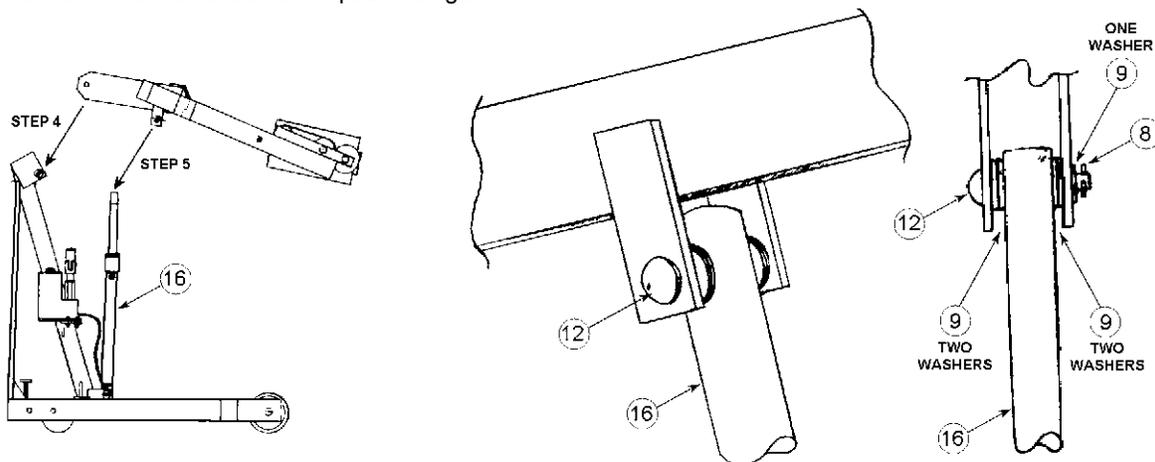

Figure 3

Figure 4

Step #6: Remove sealing plug from the top of hydraulic reservoir and fill reservoir with included container of hydraulic fluid. Replace sealing plug with the included breather plug. Your Hydra-Lift Karrier is now ready for service. Please refer to the operating and maintenance instructions provided.

**Operator's Manual for Morse Hydra-Lift Karrier Model 400AM-60
with Serial Number 1210 to 0314 (MMYY)**

Operating Instructions

1. Push the Hydra-Lift Karrier to the drum.
2. Using the "LIFT" control as described in "Machine Description - Controls" (page 3), position the drum holder assembly with the back band at the middle of the drum. (Figure 3.1). With the ratchet plate swung open and the cinch chain hanging from the chain hook, push the unit until the back band rests firmly against the drum. Some adjustment to the tilt angle of the saddle may be necessary to ensure band fits flush on the drum.
3. Attaching the drum: Drape the chain across the front of the drum and engage a link into the slot in the ratchet (Figure 3.2). Turn the ratchet clockwise to tighten chain. If ratchet turns until the pawl is beyond the last ratchet tooth, turn the ratchet back and slide the next link into the ratchet slot and try tightening again. The chain must be held tightly against the drum with the pawl engaged securely in the ratchet teeth.
4. Operate the lift function to lift drum clear of floor. Roll to dispensing location. NOTE: Do not allow the drum to impact on floor, pouring station, etc. or a spill or damage could occur.
- 5.

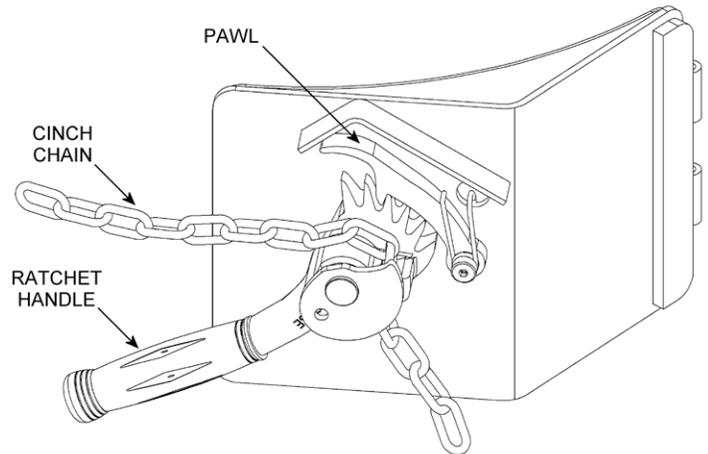

Figure 3.2

CAUTION – Do Not Transport with Drum Raised

ALWAYS LOWER THE DRUM HOLDER TO LOWEST POSITION BEFORE TRANSPORTING.

The unit can become unstable when transporting with a raised load.

6. Lift drum to desired pouring height. Operate the tilt control as described in "Machine Description - Controls" (page 3) to adjust the drum attitude. This is especially important when lifting an open drum. The floor lock should be engaged while dispensing / draining.
7. When dispensing is complete, tilt drum back to upright position. Disengage the floor lock and lower the drum to transporting height; about 6" off the floor.

WARNING - Stay Clear of Raised Drum

NEVER allow anyone to be below any part of a raised drum handler or drum. Remain behind the push handle while handling a drum.

WARNING – Do NOT Disengage the Cinch Chain When Drum is off the Ground

When the drum is in the upright position, lower the drum to the floor before releasing the cinch chain.

8. Push the unit to the drum storage area and lower to the floor in an upright position. Release the cinch chain from the ratchet by applying pressure to the ratchet handle in a clockwise direction with one hand and opening the pawl to free the ratchet with the other hand. Remove the cinch chain link from the ratchet.

Maintenance

- Periodic inspection for the general condition of structural and mechanical components is imperative for safe and efficient operation.
- Periodically inspect all moving parts, framework, and contact areas for signs of wear, fatigue, or loosening. Tighten, adjust, or replace parts as necessary to prevent failure and maintain proper function.
- Inspect the hydraulic system for oil drips, hose damage, or other signs of wear. Inspect the level and condition of the hydraulic fluid. Replace any parts that show signs of wear.
- Grease wheel bearings periodically. Oil or grease all moving parts including: the three clevis pins and the surfaces of the boom which contact the inside of the mast cap, the hinge pin, the gears and sprockets in the tilt drive, and the ratchet and pawl.
- Worn or damaged parts must be properly replaced with the correct, genuine Morse parts.
- Hydraulic pump should be filled with the provided quart of Mobil ATF D/M (Morse part # 3983-P). Material safety data sheet (MSDS) is available online. Change oil yearly, sooner depending on dirty conditions or outdoor use.
